DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

Species A: Claims 1, 2, 5, 6, 14, 15, and 18-20 are drawn to a coupler assembly that provides optical coupling using MEMS movable mirror devices shown in figure 1.

Species B: Claims 8-10, 22-24, 30, and 31 are drawn to a coupler assembly that provides optical coupling using a flexure head assembly shown in figure 3.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

The claims as originally presented included claims generic to both species. Thus the claims received a first action on the merits. However, in the response to the first action, the applicant has suggested that the patentability of each species depends on limitations that are exclusive to each species. As such, while the search for each species may overlap with one another, it is not such that a patentability determination can be made.

Claims 7, 11-13, 21, and 25-27 are currently dependent from claims 1 and 14 which are drawn to Species A. However, claims 7, 11-13, 21, and 25-27 relate to the flexure head assembly. At no point in the disclosure is it taught that the MEMS coupling assembly features can be combined with the flexure head assembly features. They are taught as separate and distinct embodiments. Therefore, should the applicant amend the claims to include the

limitations of claims 7, 11-13, 21, and 25-27 in claims that depend from the independent claims of Species B (30 and 31), then these claims would fall with Species B.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

2. A telephone call was made to Yuri Gruzdkov (Reg No 50,762) on 12/6/2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 2883

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
